- Sound deadening acoustic panel
- Recommended for interior ceilings
- Up to 4' on center spacing

Condensation Control

Drip Stop

****DS

Drip Stop can be applied to all
3/4" Rib Panels

Areas of use:

- Post frame/agricultural buildings
- Self-storage buildings
- Workshops and garages
- Insulated buildings with ceilings

*Drip Stop can hold more than
one quart of water per ten
square feet of space!*

Advantages:

- Cuts installation time nearly in half with no labor needed for installing insulation.
- Allows you to work on the roof when the weather normally would keep you off.
- Arrives at the jobsite on the steel - saving you time.
- Protects the steel, by reducing contact with corrosive fumes.

How it works

When climate conditions cause condensation to occur, Drip Stop absorbs and holds that moisture in specially designed pockets in the membrane. When conditions return to above dew point, the moisture is released back into the air as normal humidity.

Caution!

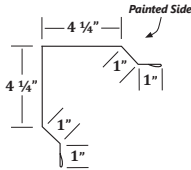

We recommend using a bottle torch to carefully burn the Drip Stop off the bottom edge of the panel on the eaves side to prevent wicking from the outside weather.

3/4" Rib Skylight Panel

SK9CL12 12' Clear 300/Pallet

Product Features:

- Has a 9" on-center profile
- Has a 10 Year warranty
- Withstands extreme climates (-40°F - 212°F)
- Is hail and wind resistant
- Will not yellow
- Has 100% UV protection
- Retains excellent optical clarity

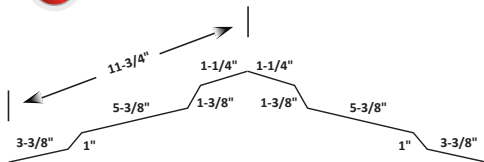

Well suited for a broad range of agricultural, commercial, and industrial applications including:

- Warehouses
- Dairy, hog, poultry and cattle barns
- Agricultural pole barns
- Nearly any other application

Skylight Ridge Cap

SKRCCL 10' 6" Ridge Cap Clear 200/Pallet

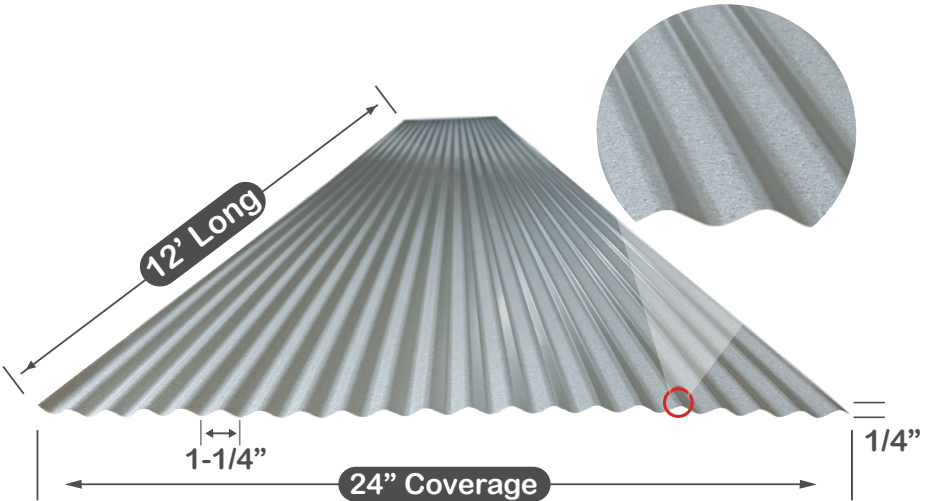

Product Features:

- Has a 10 Year warranty
- Withstands extreme climates (-40°F - 212°F)
- Retains excellent optical clarity
- Is hail and wind resistant
- Will not yellow
- Has 100% UV protection

Why a Stainless Steel diverter?

12" Ridge Cap (RC)

- In our studies the diverter is the first thing to deteriorate, leaving your investment unprotected.
- Our stainless steel diverter outlasts any steel or fiberglass diverter on the market.

Available as a lighted cupola!

Touch Up Pen

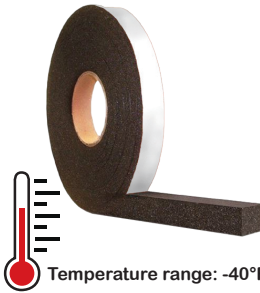

TUP** Touch Up Pen 24/Box

Touch up paint pens are a great way to fix up minor scratches that may have happened during shipping or installation. Keep some on hand to be prepared!

Seal Foam

Temperature range: -40°F to 185°F

SEEM1 1" x 1" x 19.68' Roll 26/Box

SEEM112 1-1/2" x 1" x 13.12' Roll 24/Box

Product Features:

- Supplied with self adhesive on one side. After removal of packaging, material begins gradual expansion - more slowly in cold weather than in hot
- Will not dry out and become hard and brittle
- Is UV-stable
- Conforms to contours and fills gaps
- Is highly resistant to bugs and vermin
- Will not extrude from between joints like caulk or butyl tapes
- Maintains seal during thermal expansion and contraction of building panels

Butyl Tape

Installation Diagram

SEBU1 1" x 3/32" x 50' Roll 10/Box

SEBU3 3/8" x 3/32" x 45' Roll 48/Box

Product Features:

- Has superior adhesive strength
- Is resistant to UV light
- Withstands extreme roof temperatures
- Seal is not affected by expansion and contraction of metal

Caulk

SECA Metal Roof Sealant 10.1 oz. 12/Box

Metal Roof Sealant provides a weather tight seal against water, wind, dust, and dirt. It offers exceptional adhesion to standard metal, aluminum, steel, galvanized surfaces, plastics, and glass. It also provides unbeatable adhesion to wood, masonry, PVC, and most common building materials.

Product Features:

- Remains perfectly flexible
- May be painted with water based paints 1 hour after application
- Is suitable for all climates
- Produces long-lasting weather-tight seals

Application Temp: above 0° F

Foam Closures

3/4" Rib Inside Closure

PBR Outside Closure

PBR Inside Closure

Product Features:

- Dimensions: 36" x 1"
- High-density, blocks air flow
- Exceptional adhesion to building materials
- UV light resistant

LP2 Vent Strip

VELP	3' LP2 Ridge Vent Strip	25/Box
-------------	-------------------------	--------

Product Features:

- Pre-applied adhesive
- High airflow for good ventilation
- 3/4" rib profile for a tight seal against the weather
- Tough mesh does not wrap up on screws

Uni-Vent

VEU	1" x 1-1/2" x 20' Uni-Vent Roll	135/Box
------------	---------------------------------	---------

Product Features:

- Has a pre-applied adhesive
- Ventilates under ridge cap and hips
- Figure 1 Roll per 10' 6" Ridge Cap

Understanding Our Substrates

G100 Galvanized Substrate

Hot dipped zinc coating

Measured in weights of G60, G90, and G100

G100 means 1 oz of zinc per sq. ft. top and bottom combined

Suggested Uses

- Hog barns

PRIME 3/4" Rib Galvalume Substrate

- 55% Aluminum, 45% Galvanized by volume
- Application is measured by oz./sq. ft. on both sides
- AZ50 coating is used for PRIME
- AZ35 is used for liner panel

Suggested Uses

- Commercial

- Residential

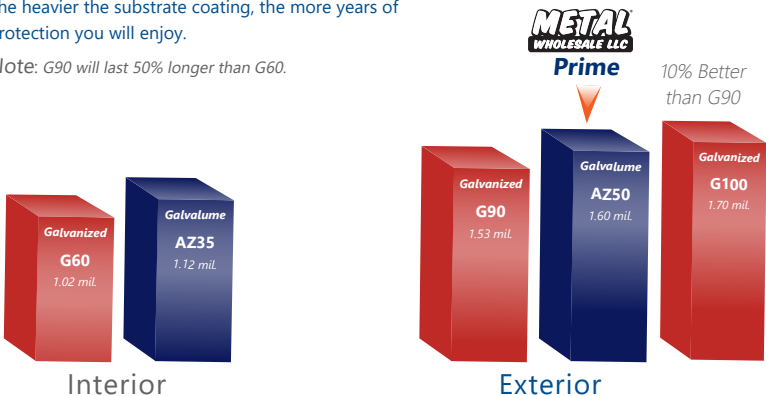

- Polebarns

THICKNESS of Substrate Coatings

The heavier the substrate coating, the more years of protection you will enjoy.

Note: G90 will last 50% longer than G60.

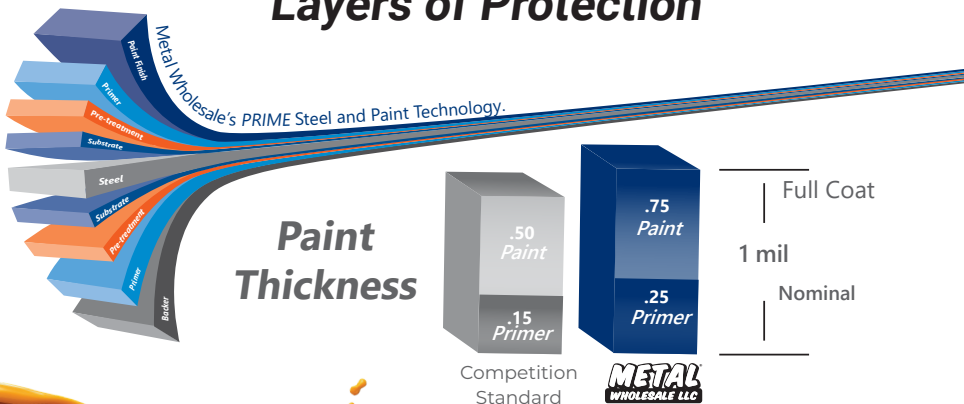

Interior

Recommended for interior liner panels because of the minimal protection against corrosion.

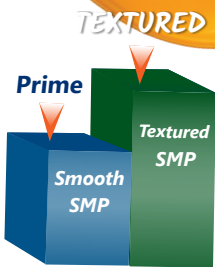

Exterior

Recommended for exterior. The heavier coatings will offer superior protection against corrosion.

Layers of Protection

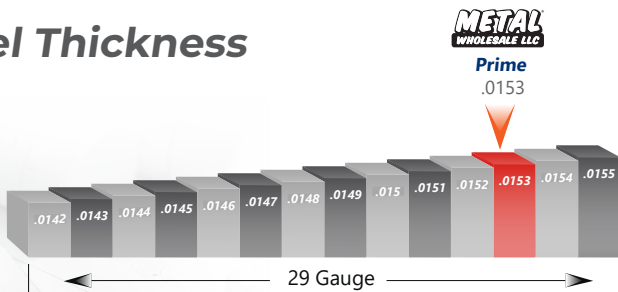

Paint Types

Textured - (SMP) - The absolute top in color retention which results in maximum protection against fading.

Smooth - (SMP) Most widely used on building products with standard protection against fading and chalking.

Steel Thickness

TEXTURED Wins Again!

The Metal Wholesale Team is doing research at a paint testing fence in southern Florida. We are very diligent about quality products and have product samples from our production facility on the test fence in every color we offer. Our Research Team has partnered with the top coating companies in the industry to test TEXTURED metal coatings and reach the same results every time. TEXTURED metal coatings will outperform Smooth SMP when it comes to fading and color retention.

Original
(Not Exposed)

10 Year Acceleration
(Exposed on test fence)

TEXTURED

Smooth SMP
(Silicone Modified Polyester)

These samples have been exposed to the harsh conditions of southern Florida for over 5 years. These intense conditions, equivalent to more than twice the exposure of anywhere north of Jacksonville Florida, rapidly accelerates the fading on painted panels and is the reason a lot of metal roofs in southern Florida are unpaired.

Textured Metal Advantages

- Exceptional color retention
- Extra fade resistant
- Extremely durable finish
- Non-slip footing for safety
- Elegant style with a matte finish
- All your friends will love it!

The unique texture of Metal Wholersale's TEXTURED finish redirects light for enhanced visual depth, promising an improvement over the regular smooth finish. The responsive design allows its subtle shading to mirror the eye's motion, creating beautiful, shifting, shimmering tones.

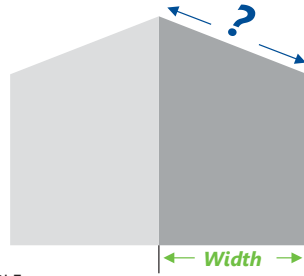

Testimonials

- What I like about TEXTURED metal roofing, as a contractor and installer, is that it hides a lot of small wrinkles or scratches that can happen during installation and it also brings out your color nicely. It doesn't have that glare from the sun. I would use TEXTURED paint over smooth on any job! - Norman Gingerich
- The appearance and durability of TEXTURED products adds value to almost any project. - KC Builders
- TEXTURED metal gives your home a softer appeal, not shiny and glistening like the smooth pole barn metal. It's easier to walk on during installation, especially on steeper slopes, and in adverse conditions. - John Wagler

Roof Metal Length Calculation

Roof Pitch	Slope Factor
12/12	1.414
10/12	1.302
8/12	1.202
6/12	1.120
5/12	1.083
4/12	1.054
3/12	1.031
2/12	1.014
1/12	1.0035

EXAMPLE

1.054 (4/12 pitch) x 20' Width = 21' Roof Panel Length

Remember to include overhangs in the width
